INTRODUCTION

I have taken the Library Search Interface as a use case for study. The function is basically required to take in search requests based on the users Search Input and Search Type. Three search types are available: Search by ISBN, Search by Author and Search by Title. These will extend the Search function. Some functions have been added to the previously presented Proposal. Also changes have been made in the Model Library function which has now been divided into database actions based on user to have classes with lesser functionality as suggested by Liz Boese.

USE CASE DIAGRAM

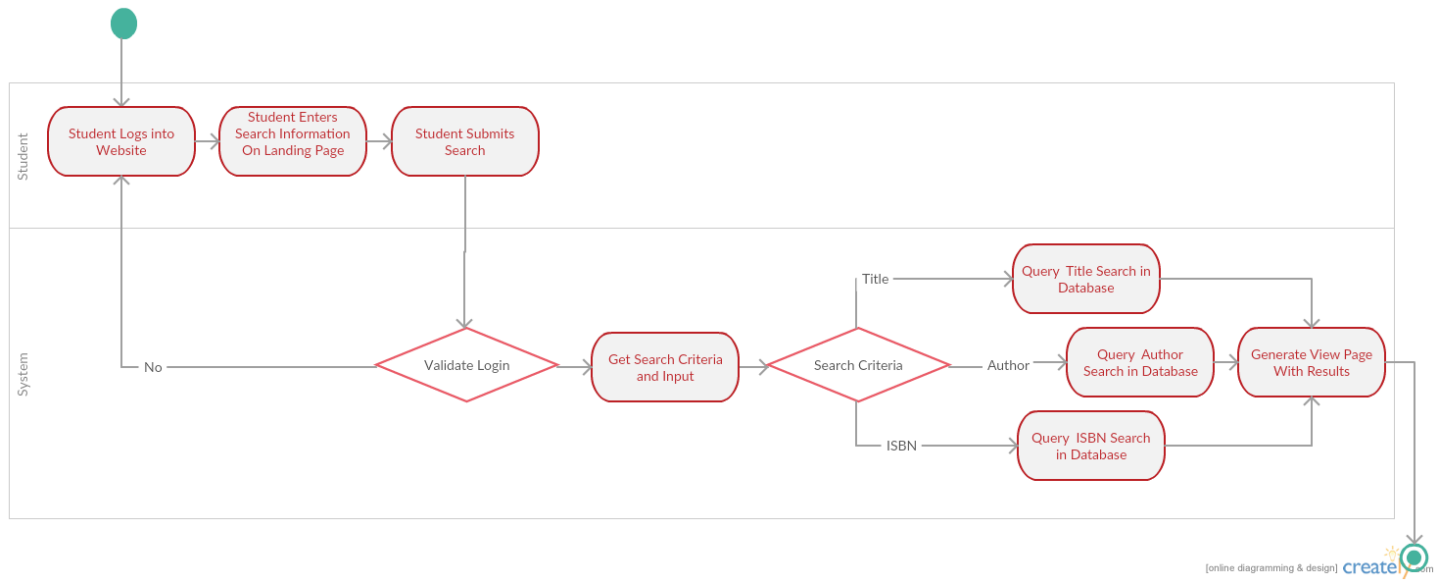

USE CASE DOCUMENTS

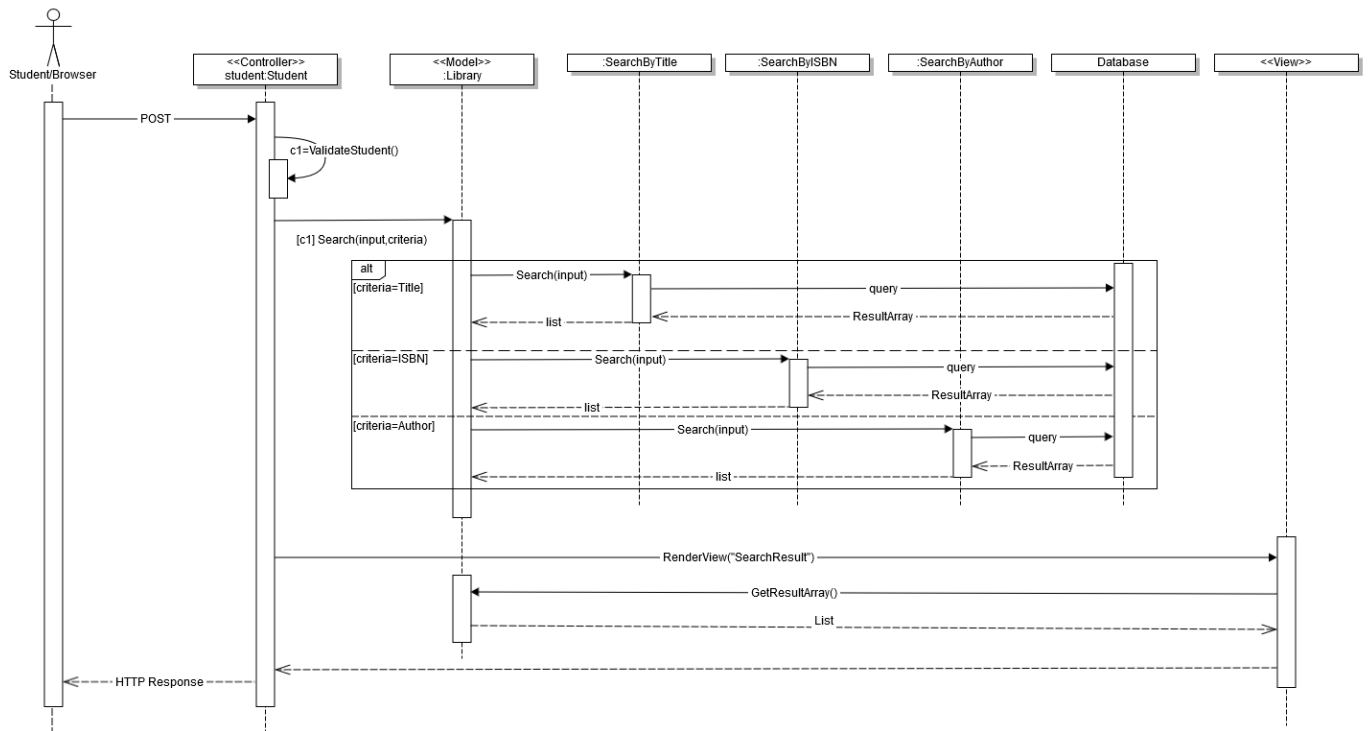

Use case name	Login	
Participating actors	Initiated by Librarian/Administrator/Student	
Flow of events	Actor 1. User enters login information 2. User hits submit button	System 2. System Authenticates Login 3. Displays Back Landing page for based on type of user on Login
Entry Conditions	N/A	
Exit Conditions	Session information is saved	

Use case name	Search	
Participating actors	Initiated by Student	
Flow of Events	Student 1. Student lands on homepage after login 2. Student selects type of search 3. Student enters text to search 4. Student hits search button	System 4. Database is queried for books that satisfy the search input and criteria 5. These are displayed back to the users browser
Entry Conditions	Student is logged into LibraryManagementSystem	
Quality Requirements	Query can be performed on database
